

Updated Resource Work Group Protocol

Black Canyon Hydroelectric Project

FERC Project No. P-14110

November 2012

Three work groups for “Fisheries,” “Recreational Boating and River Access,” and “Wildlife, Vegetation, and Sensitive Habitats” have been organized. The goal of the work groups will be to bring together technical experts and resource managers to assist Black Canyon Hydro, LLC (BCH) in effectively revising the proposed study plans to address participant concerns. FERC may participate, but work group interactions will be considered informal contact conducted between the applicant and other participants.

Communication between work group members will primarily be done by e-mail and conference call, but in-person meetings may be arranged as necessary. See the “Revised Communication and Information Protocol” for more communication details.

1. Fisheries Work Group Members:

- Brock Applegate (Washington Department of Fish and Wildlife)
- Hal Beecher (Washington Department of Fish and Wildlife)
